

Week 1 — Number Sense & Numerals — Answer Key

Q1. D) 7,00,000 — In the Indian place-value system, 7,25,364 has digits 7-2-5-3-6-4: 7 is in the **lakhs** place, so its value is $7 \times 1,00,000 = 7,00,000$.

Q2. A) Eight lakh thirty-four thousand five hundred twenty-one — 8,34,521 reads as 8 lakh, 34 thousand, 521.

Q3. A) 50,00,000 + 6,00,000 + 90,000 + 200 + 10 + 7 — 56,90,217: 5 = ten-lakhs (50,00,000), 6 = lakhs (6,00,000), 9 = ten-thousands (90,000), 0 = thousands (skipped), 2 = hundreds (200), 1 = tens (10), 7 = ones (7).

Q4. D) 34,65,987 — Comparing after "34,": 56789, 65789, 56987, 65987 — the largest is 65987.

Q5. B) 6,75,000 — Rounding to the nearest thousand looks at the hundreds digit (8); since $8 \geq 5$, round up: 674 thousand $\rightarrow$ 675 thousand.

Q6. A) XCIV — $94 = 90 \text{ (XC)} + 4 \text{ (IV)} = \text{XCIV}$.

Q7. B) 89 — $\text{LXXXIX} = \text{L}(50) + \text{X}(10) + \text{X}(10) + \text{X}(10) + \text{IX}(9) = 89$.

Q8. B) 1,00,00,000 — $99,99,999 + 1 = 1,00,00,000$ (one crore).

Q9. A) 49,99,999 — $50,00,000 - 1 = 49,99,999$.

Q10. A) 23,54,876; 23,54,678; 23,45,876; 23,45,678 — Comparing the last 4 digits of each (after "23,"): $54876 > 54678 > 45876 > 45678$.

Q11. B) 100 — 1 crore = 1,00,00,000; 1 lakh = 1,00,000; $1,00,00,000 \div 1,00,000 = 100$.

Q12. B) 1,00,000 — The pattern adds 25,000 each time: 25,000; 50,000; 75,000; 1,00,000; 1,25,000.

Q13. B) 29 — The pattern adds 6 each time: 5, 11, 17, 23, 29.

Q14. B) 450 — A number divisible by both 2 and 5 must be divisible by 10, i.e. end in 0. Only 450 ends in 0.

Q15. A) 5,30,246 — $5,00,000 + 30,000 + 0 + 200 + 40 + 6 = 5,30,246$.

Scoring: 15/15 — excellent, move to Week 2. 13–14/15 — solid, re-read the missed explanations. Below 13/15 — the Indian place-value system (lakhs/crores) is the foundation for every later topic; redo this assignment after 2 days before moving on.
