

Week 7 — Geometry, Symmetry, Perimeter & Area —

Answer Key

Q1. C) 8 — An octagon has 8 sides.

Q2. B) Circle — A circle is a curved shape with no straight sides at all.

Q3. C) 3 — An equilateral triangle has 3 lines of symmetry, one through each vertex and the midpoint of the opposite side.

Q4. B) Right — A right angle measures exactly 90° .

Q5. C) Obtuse — An obtuse angle is between 90° and 180° .

Q6. B) 60 cm — Perimeter of a square = $4 \times \text{side} = 4 \times 15 = 60 \text{ cm}$.

Q7. B) 72 cm — Perimeter = $2 \times (\text{length} + \text{breadth}) = 2 \times (22+14) = 72 \text{ cm}$.

Q8. B) 12 cm — Side = Perimeter $\div 4 = 48 \div 4 = 12 \text{ cm}$.

Q9. B) 198 sq cm — Area = length $\times$ breadth = $18 \times 11 = 198 \text{ sq cm}$.

Q10. B) 256 sq cm — Area = side $\times$ side = $16 \times 16 = 256 \text{ sq cm}$.

Q11. B) 12 m — Breadth = Area $\div$ length = $168 \div 14 = 12 \text{ m}$.

Q12. B) 2 — A straight angle is 180° ; $180 \div 90 = 2$.

Q13. B) Cone — A cone has one curved surface and one flat circular base.

Q14. D) 12 — A cuboid has 12 edges.

Q15. C) 96 m — The path adds 2 m on every side, so the outer square's side = $20 + 2 + 2 = 24 \text{ m}$;
perimeter = $4 \times 24 = 96 \text{ m}$.

Scoring: 15/15 — excellent, move to Week 8. 13–14/15 — solid, review the missed ones. Below 13/15 — the perimeter-vs-area mix-up is the most common error; say out loud which one each question is actually asking for before you start calculating.
