

Week 8 — Data Handling — Answer Key

Q1. D) 13 — $2 \text{ groups} \times 5 = 10$, plus 3 extra strokes = 13.

Q2. C) Wednesday — Wednesday shows 4 symbols $\times 20 = 80$ books, the fewest.

Q3. C) 700 — Monday (100) + Tuesday (140) + Wednesday (80) + Thursday (160) + Friday (120) = 700.

Q4. A) 80 — Thursday = $8 \text{ symbols} \times 20 = 160$ books; Wednesday = $4 \text{ symbols} \times 20 = 80$ books; difference = $160 - 80 = 80$.

Q5. C) 140 — Total $(700) \div 5 \text{ days} = 140$.

Q6. C) Tina — Tina scored 96, the highest in the graph.

Q7. C) 30 — Highest (96) – lowest (66) = 30.

Q8. B) 3 — Aman (84), Rohan (90), and Tina (96) all scored above 80.

Q9. B) 486 — $84+72+90+66+96+78 = 486$.

Q10. C) 81 — $486 \div 6 = 81$.

Q11. B) 200 — $8 \times 25 = 200$.

Q12. C) 40 — Tea = $35\% \times 200 = 70$; coffee = $45\% \times 200 = 90$; juice = $200 - 70 - 90 = 40$.

Q13. D) April — April had 77 mm, the highest.

Q14. B) 220 mm — $45 + 60 + 38 + 77 = 220$.

Q15. C) 22 — Average = $220 \div 4 = 55$; difference from highest (77) = $77 - 55 = 22$.

Scoring: 15/15 — excellent, move to Week 9. 13–14/15 — solid, review the missed ones. Below 13/15 — practice reading one more real pictograph/bar graph carefully; most errors here come from misreading a value, not from the arithmetic itself.
