

Week 10 — Answer Key

Part A — Ranking, Direction Sense, Clock & Calendar

Q1. B) 20th — Position from the right = total – position from left + 1 = $30 - 11 + 1 = 20$.

Q2. B) 40 — Total = $15 + 26 - 1 = 40$.

Q3. B) Green — Order from top to bottom: Yellow, Red, Green, Blue, Black — Green is the middle (3rd of 5).

Q4. A) East — South (180°) rotated 90° anticlockwise (subtract 90°) = 90° = East.

Q5. A) 9 km East — Net East distance = $8 + 6 - 5 = 9$ km East.

Q6. A) East — The rule rotates each direction 90° clockwise (East → South, South → West); applying the same rule, North → East.

Q7. B) Tuesday — 23 days = 3 full weeks (21 days, same day: Thursday) + 2 more days back → Wednesday, Tuesday.

Q8. B) Friday — $25 - 1 = 24$ days later; $24 \div 7$ leaves remainder 3, so count 3 days forward from Tuesday: Wednesday, Thursday, Friday.

Q9. C) 8:35 — $7:45 + 50$ minutes = 8:35.

Q10. C) Team D — The chain is $A > B > C > D$, and E is highest of all — that doesn't change who's lowest. D is the lowest.

Part B — Mirror Images, Water Images & Embedded Figures

Q11. C — Option C correctly mirrors P left-right: the bowl of the P flips to the other side of the vertical stroke.

Q12. A — Option A correctly mirrors R left-right.

Q13. D — Option D correctly mirrors the digit 2 left-right.

For every mirror question: check each wrong option against what it actually is — the figure unchanged, flipped top-to-bottom instead of left-right, or spun 180° . Only a true left-right flip is a mirror image.

Q14. B — "b" flipped upside-down (its true water image) looks like "p". (Option A is unchanged; C is "b" mirrored left-right, which looks like "d"; D is "b" rotated 180° , which looks like "q". The four

letters b/d/p/q are exactly the four ways of flipping one shape — a good way to remember the difference between a mirror image and a water image.)

Q15. D — Option D correctly flips G upside-down (its true water image).

Q16. C) Pentagon — The composite figure is a square with a pentagon overlapping its top — the pentagon's outline is clearly traceable within it.

Q17. B) Rectangle — The composite figure is a circle with a rectangle overlapping its centre — the rectangle's outline is clearly traceable within it.

Q18. C) Triangle — The composite figure is a hexagon with a triangle overlapping its lower portion — the triangle's outline is clearly traceable within it.

Scoring: 15/18 or higher — excellent, move to Week 11. 12–14/18 — solid, review the missed ones. Below 12/18 — for ranking questions, draw the line/row on paper and place each person or box in order; for mirror/water questions, the b/d/p/q letters in Q14 are a genuinely useful memory trick to keep using.
